Screening for Oral Cancer in General Dental Practice

An event for Dentists, Dental Therapists & Dental Hygienists

Speaker:

Professor Mike Lewis
Dean of School of Dentistry, Professor of Oral Medicine University of Cardiff

Dentistry plays a vital role in the screening and management for Oral Cancers. Dentists, dental therapists and dental hygienists are in a unique position to recognise if there may be a potential abnormality within the oral cavity.

Professor Mike Lewis highlights how to recognise malignant and potentially malignant lesions within practice, their classification and a broad overview of the latest developments in oral malignancy management. This will allow clinicians the opportunity to discuss their views on this highly topical area.

Delegates will start the programme with an interactive study, where they will be asked to participate and record their views on a series of malignant, potentially malignant and benign oral conditions. This will then be followed by the educational component, where they will learn how to recognise and manage these lesions in practice.

VENUE: Large Lecture Theatre University Dental Hospital, Heath Park Cardiff CF14 4XY
DATE: Wednesday 27th November 2013
TIME: Registration 6.30pm START: 6.45—8.30pm
