

# See and Be Seen: Dental Therapist

But what is it all about?  
my teeth seem fine. I'm not in any pain...  
I've never seen a dental therapist  
before.

## Let us tell you what we do

**We're all about prevention!** Wouldn't you want to keep all your own teeth for as long as you can?

**A visit to the chair doesn't always have to be painful.**  
If you do your part and follow a routine, it will minimise the discomfort.

**It is not just about the teeth.** It is also about your gums health, your mouth health, and your health overall.

**It is important to see us regularly - did you know that you can develop gum disease or decay and not even know it?** That's right, you might not notice the initial symptoms until it's late and when things could get complicated and expensive.

**We can advise you on pain, diet and lifestyle.**  
We can also help if you need a filling or if you have lost a crown.

**We can also provide complex treatment and care for your child.**

Don't worry if you haven't seen us before, or if you haven't seen a dentist in a long time either.  
We can take things slowly and start with small steps.

**You are in charge!**

We're **here for you.**

## See you soon!
