Tooth Super Heroes

Dental Hygienists & Therapists

How can we save your teeth?

A dental hygienist and therapist has an essential role in helping their patients by providing them with preventative care.

This mainly focuses on treating gum disease, by removing plaque and calculus deposits from your teeth.

It is important to attend check up appointments, where we can do an oral health examination, and provide you with oral hygiene advice to help you look after your teeth at home, such as brushing and flossing techniques.

Our role involves:
- Scaling teeth
- Applying fissure sealants
- Providing local anaesthetic
- Temporary and Permanent fillings
- Taking X-Rays and discussing them with the patient
- Taking impressions
- Teeth whitening

FOR CHILDREN WE CAN:
- Extract teeth
- Treat the pulp
- Place preformed metal crowns

Are these my healthy pink gums or is it my Super hero cape?
